

Press Release

It's Easy to go Green with EnOcean

Energy costs are rising. Resources of oil, coal and gas are running low. More and more the change in climate is dominating discussions at home and abroad. Taking these facts into consideration, the sustained handling with energy has become of paramount importance for a guaranteed future of companies.

Bright times for "smart green buildings", convincing by a building control technology that is easy to operate, maintenance-free and energy-efficient. For more than two decades, EnOcean has become innovation and technology leader in this promising field of business.

80% of the total costs of a building arise during operation, only 20% during the construction time. Thus, low energy consumption is the main quality criterion for builder-owners and operators.

Thanks to latest sensor technology EnOcean ensures an ideal exhaustion of saving potentials, e.g. by offering individually matching solutions for the adaptation of heating, air-conditioning and light control to the actual use of a room.

Their innovative and proven wireless product line is specially designed for new buildings and retrofitting. Meanwhile, more than 60,000 systems are installed.

The advantages for people and the environment are obvious: The room climate is improved, the CO2 emission reduced and costs are significantly cut. A building equipped with smart sensor technology by EnOcean is definitely more economic in the long run than a conventional building. Last but not least the efficiency of a building is of great importance for the assessment of a real estate.

For products using EnOcean technology speak to Slaney Direct, their catalogue can be downloaded from their website at www.slaneydirect.co.uk or email for your own personal copy to info@slaneydirect.co.uk.
