

Press Release

...in with the New for 2013

Bigger • better • faster

Slaney Direct are pleased to announce their new partners for 2013.

S+S Regeltechnik for sensors and spega (Spelsberg Gebäudeautomation GmbH) for room automation.

From temperatures and pressures through humidity, light intensity and motion up to air quality and flow - S+S Regeltechnik stands for a complete spectrum of high-quality sensors and field devices for measuring, switching and control tasks in the sectors of building automation. Including a range of wireless sensors and receivers utilising the EnOcean technology.

Multifunctional measuring transducers for most diverse applications

Whether for a museum, hospital, hotel, school, sports arena, car dealer, assembly hall, power plant, or refinery - S+S's sensors and controllers are developed for highest requirements. Because of their reliable precision, their devices are established in many sectors of building automation and room automation.

Based on comprehensive experience with public and institutional projects of any nature we develop complete solutions for industry specific tasks of building automation such as air conditioning and refrigeration technology, ventilation and clean room technology, for food and pharmaceutical industry, plant and mechanical engineering, rotational speed and limit value control.

Certified quality

Whether thermostat, sensor or controller – S+S's devices are developed and produced in Germany. Their standard range of products is available at 24-hour service. A highly efficient warehouse and shipping concept minimises delivery periods and lead times. That makes them quick and flexible.

spega – over 10 years of expertise in room automation.

For more than 10 years, intelligent buildings have been spega passion. They recognised early on the importance of room automation for the energy efficiency, flexibility of use and ergonomics of commercial buildings. These requirements led to the creation of their room automation system e.control, which represents the most comprehensive and functional system of its kind today.

To protect their customers' investments, they consciously rely only on open standards from the room automation and IT fields. In this way, e.control combines the best-in-class LON, BACnet, DALI, SMI and EnOcean technologies with the IP world to create a uniform room automation system with a unique functional range. Active participation in the relevant organisations is therefore a logical step for them.

And since they have been committed to the sustainability of buildings right from the beginning, it goes without saying that they are a member of the German Sustainable Building Council.

The system ranks as one of the most comprehensive and functional of its kind and also complies with the most stringent requirements of EN 15232 and VDI 3813.
